

# EduVision DV

Higher Education Performance Dashboard

**Dashboard Storyboard**

Module 4 — Dashboard Planning & Prototyping

4 dashboards · 35 worksheet zones · shared filters · planned navigation

## Contents

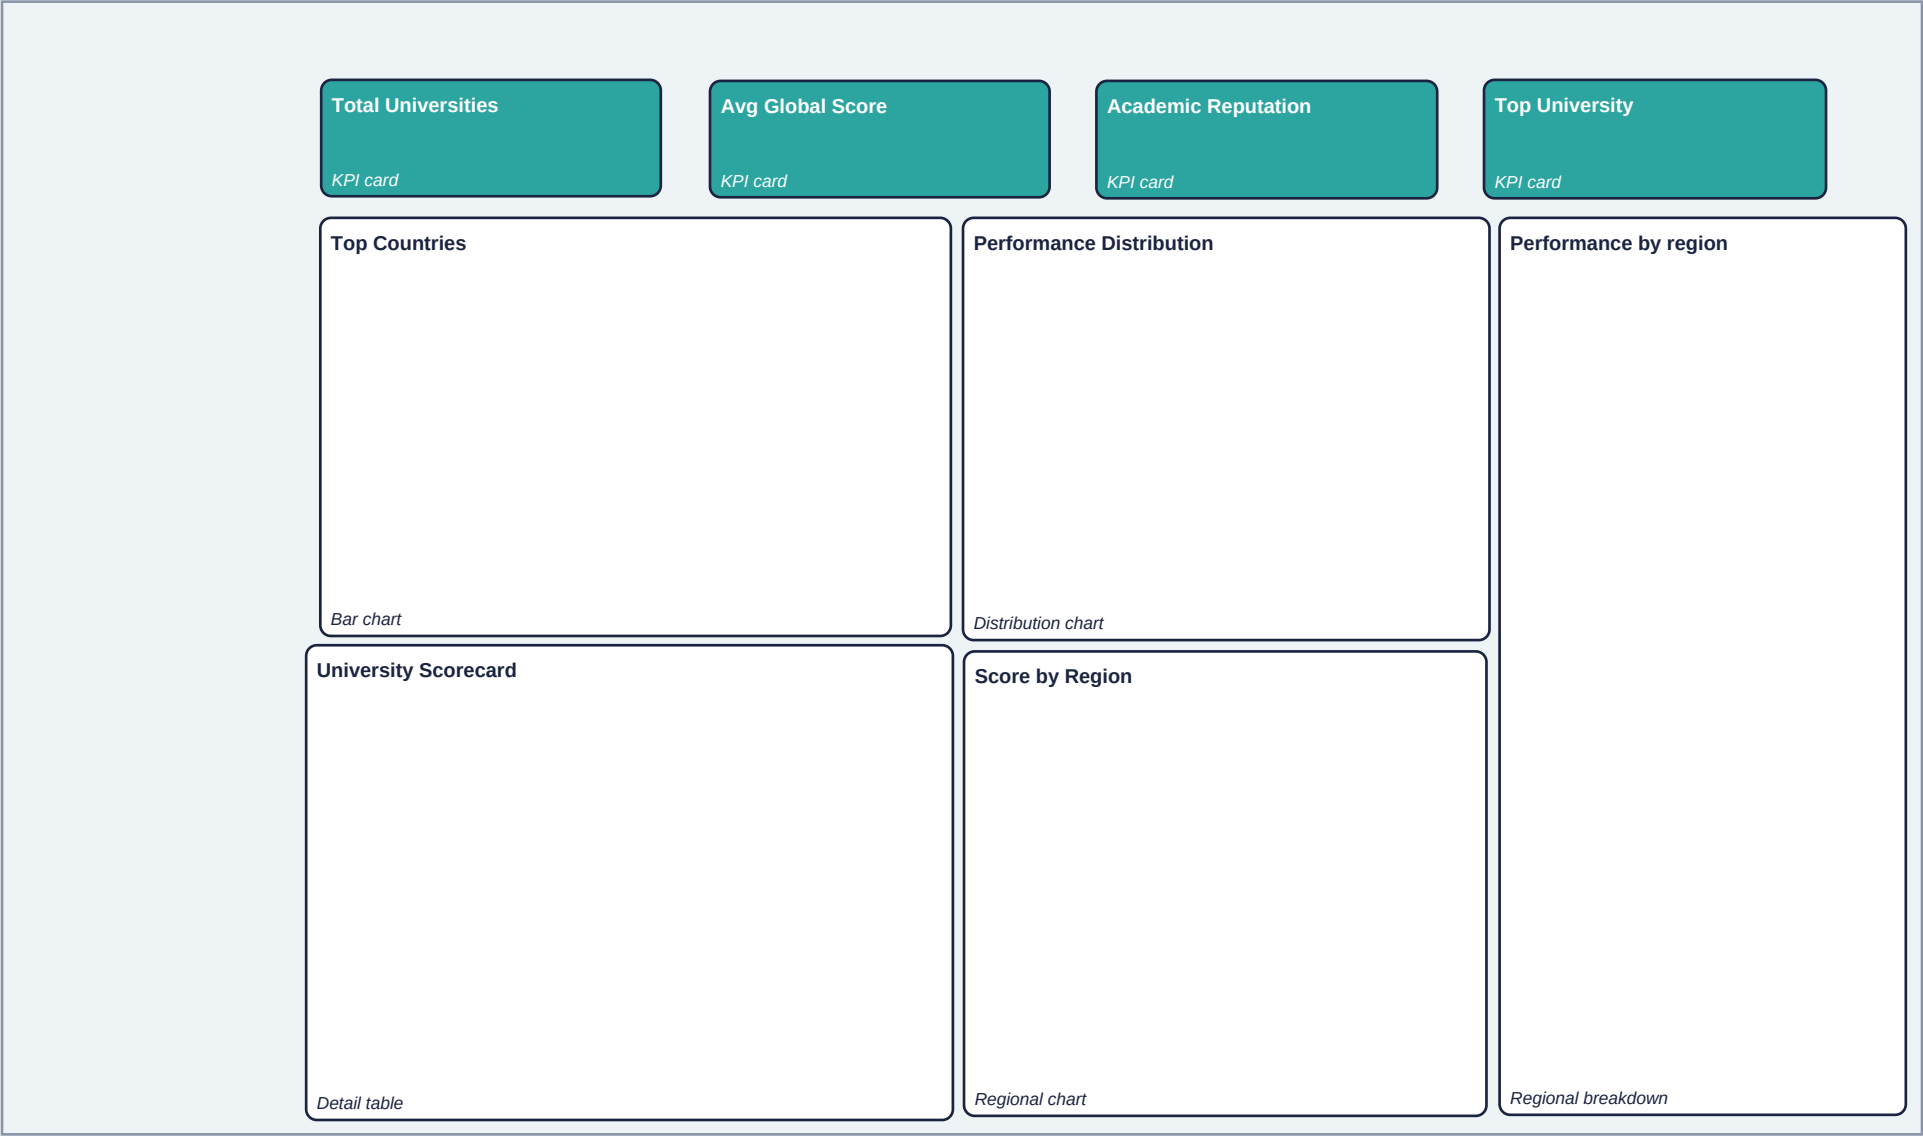

- 1 Cover
- 2 Contents & Design Principles
- 3 University Overview — Wireframe
- 4 Research Analytics — Wireframe
- 5 Student Analytics — Wireframe
- 6 Country Comparison — Wireframe
- 7 Navigation & Filter Flow

## Design Principles

- Fixed 1900×1100 canvas per dashboard so every view renders consistently.
- Top row: 4 KPI scorecards for an immediate read of scale and standing.
- Middle/lower rows: comparison charts, regional breakdowns, and leaderboards sized by analytical priority.
- Every dashboard carries the same 3 quick filters (Region, Country, Performance Category) for a consistent interaction model.
- Navigation buttons planned on every dashboard so a viewer can move between all four without using the tab bar.

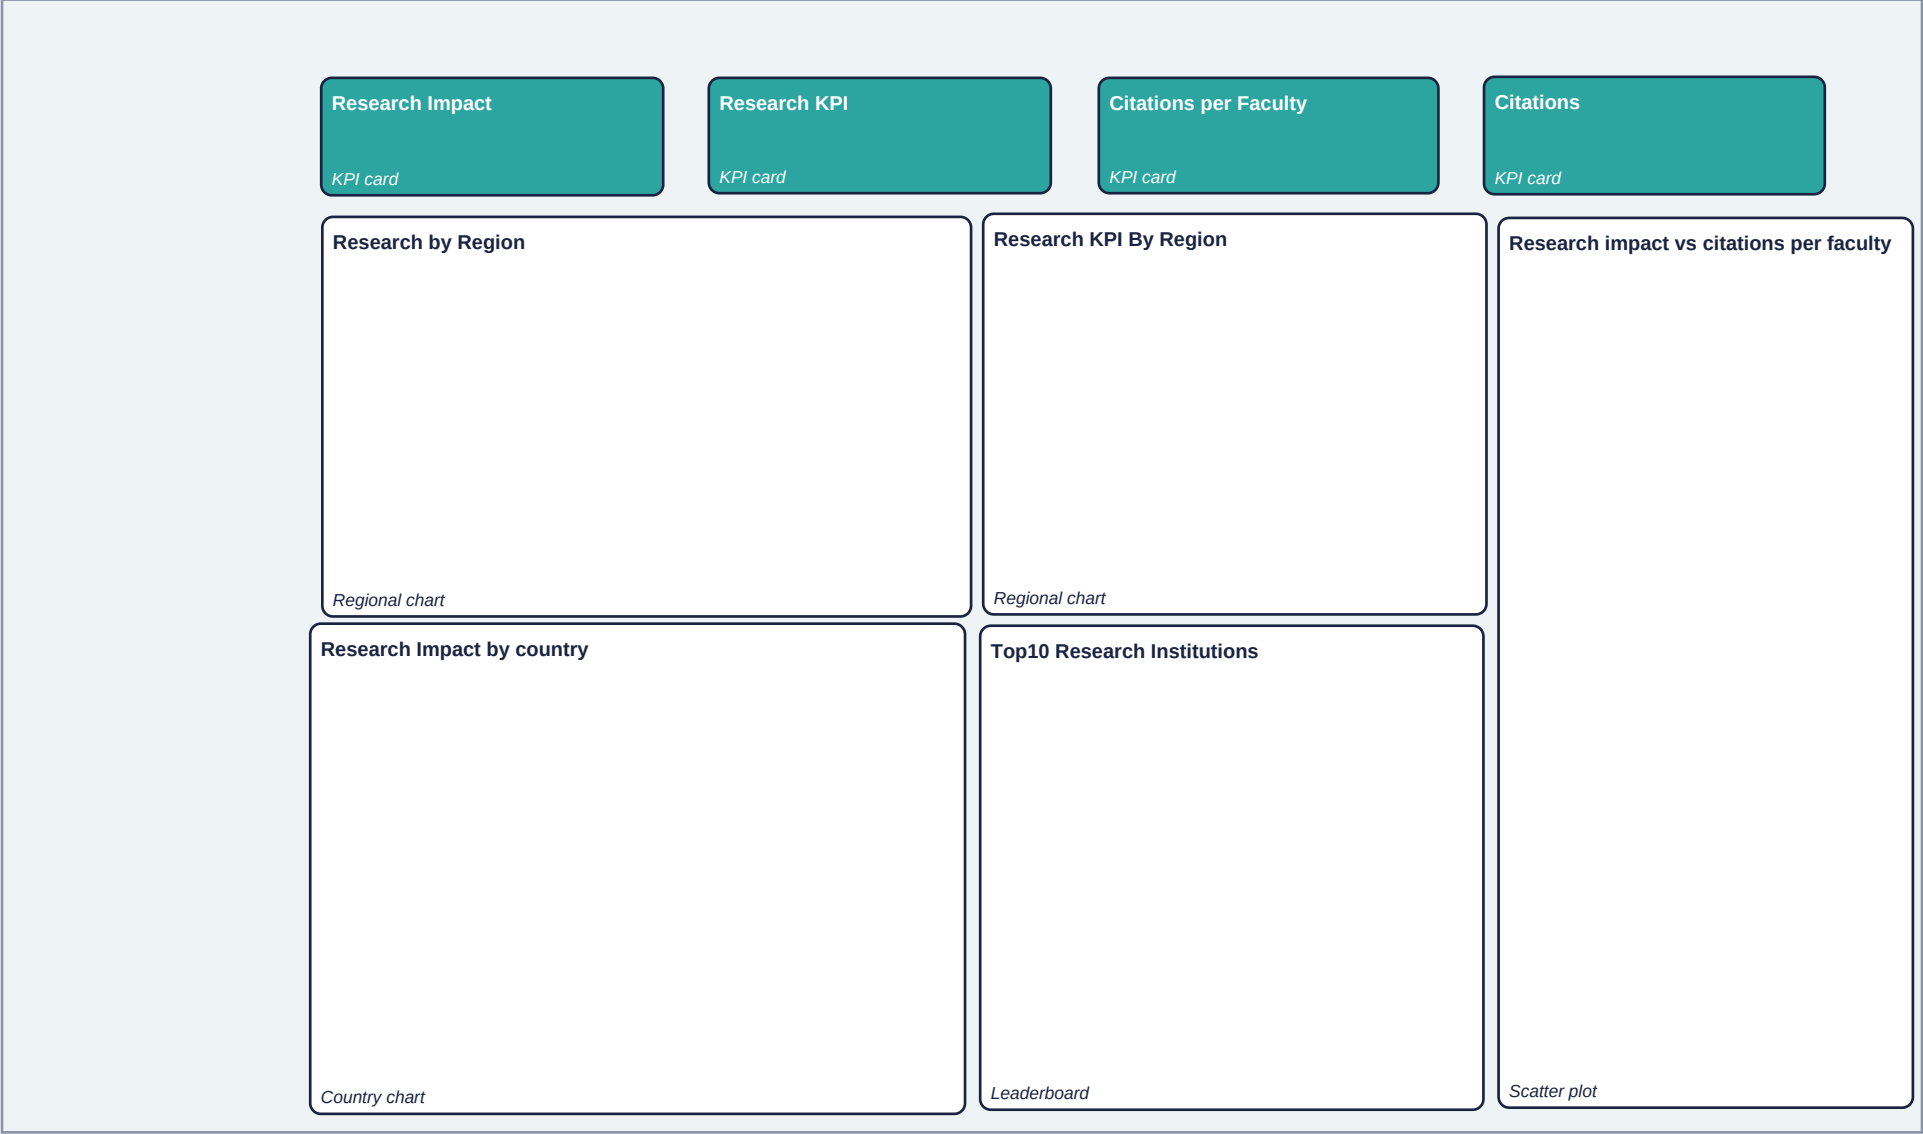

Filters: Region · Country · Performance Category

First-glance summary: who leads globally and how performance is distributed.

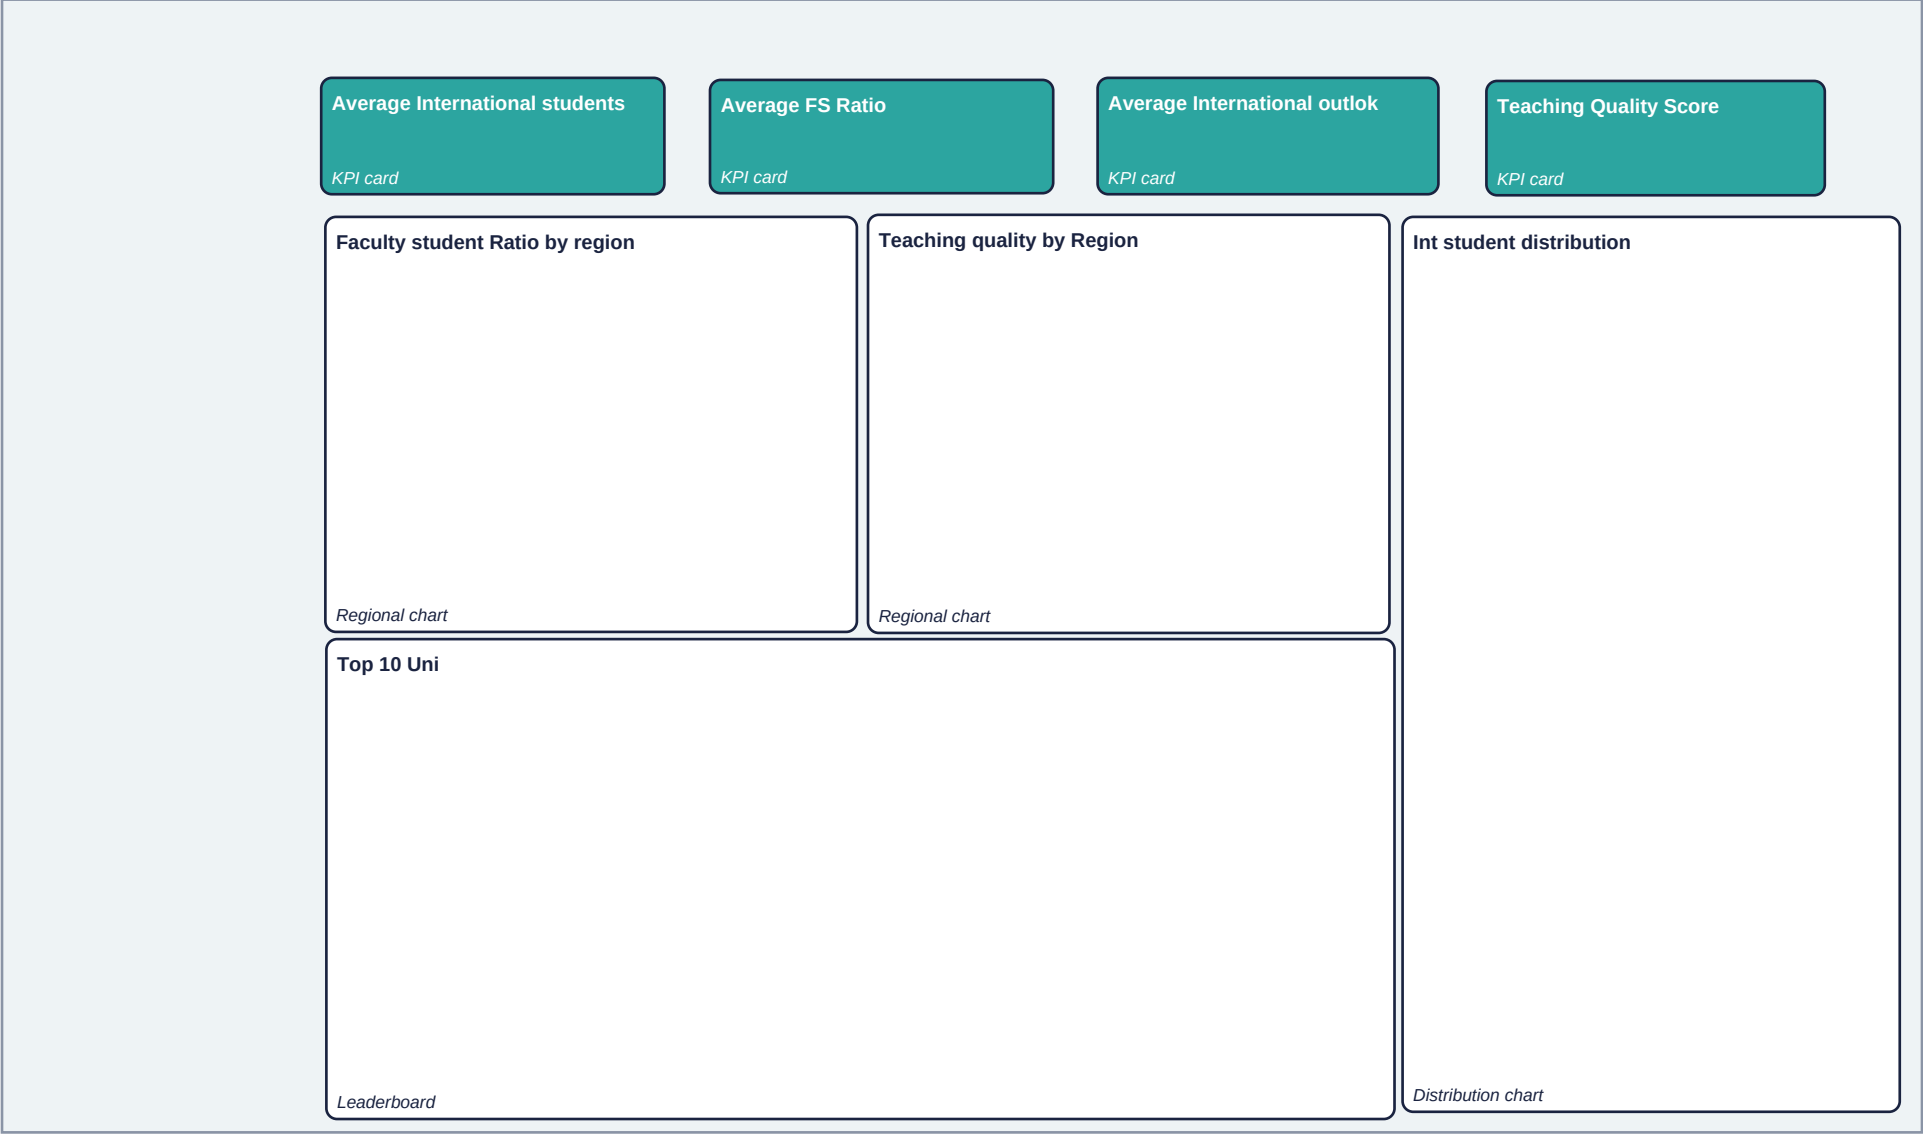

Filters: Region · Country · Performance Category

Compares research output and citation strength independent of overall rank.

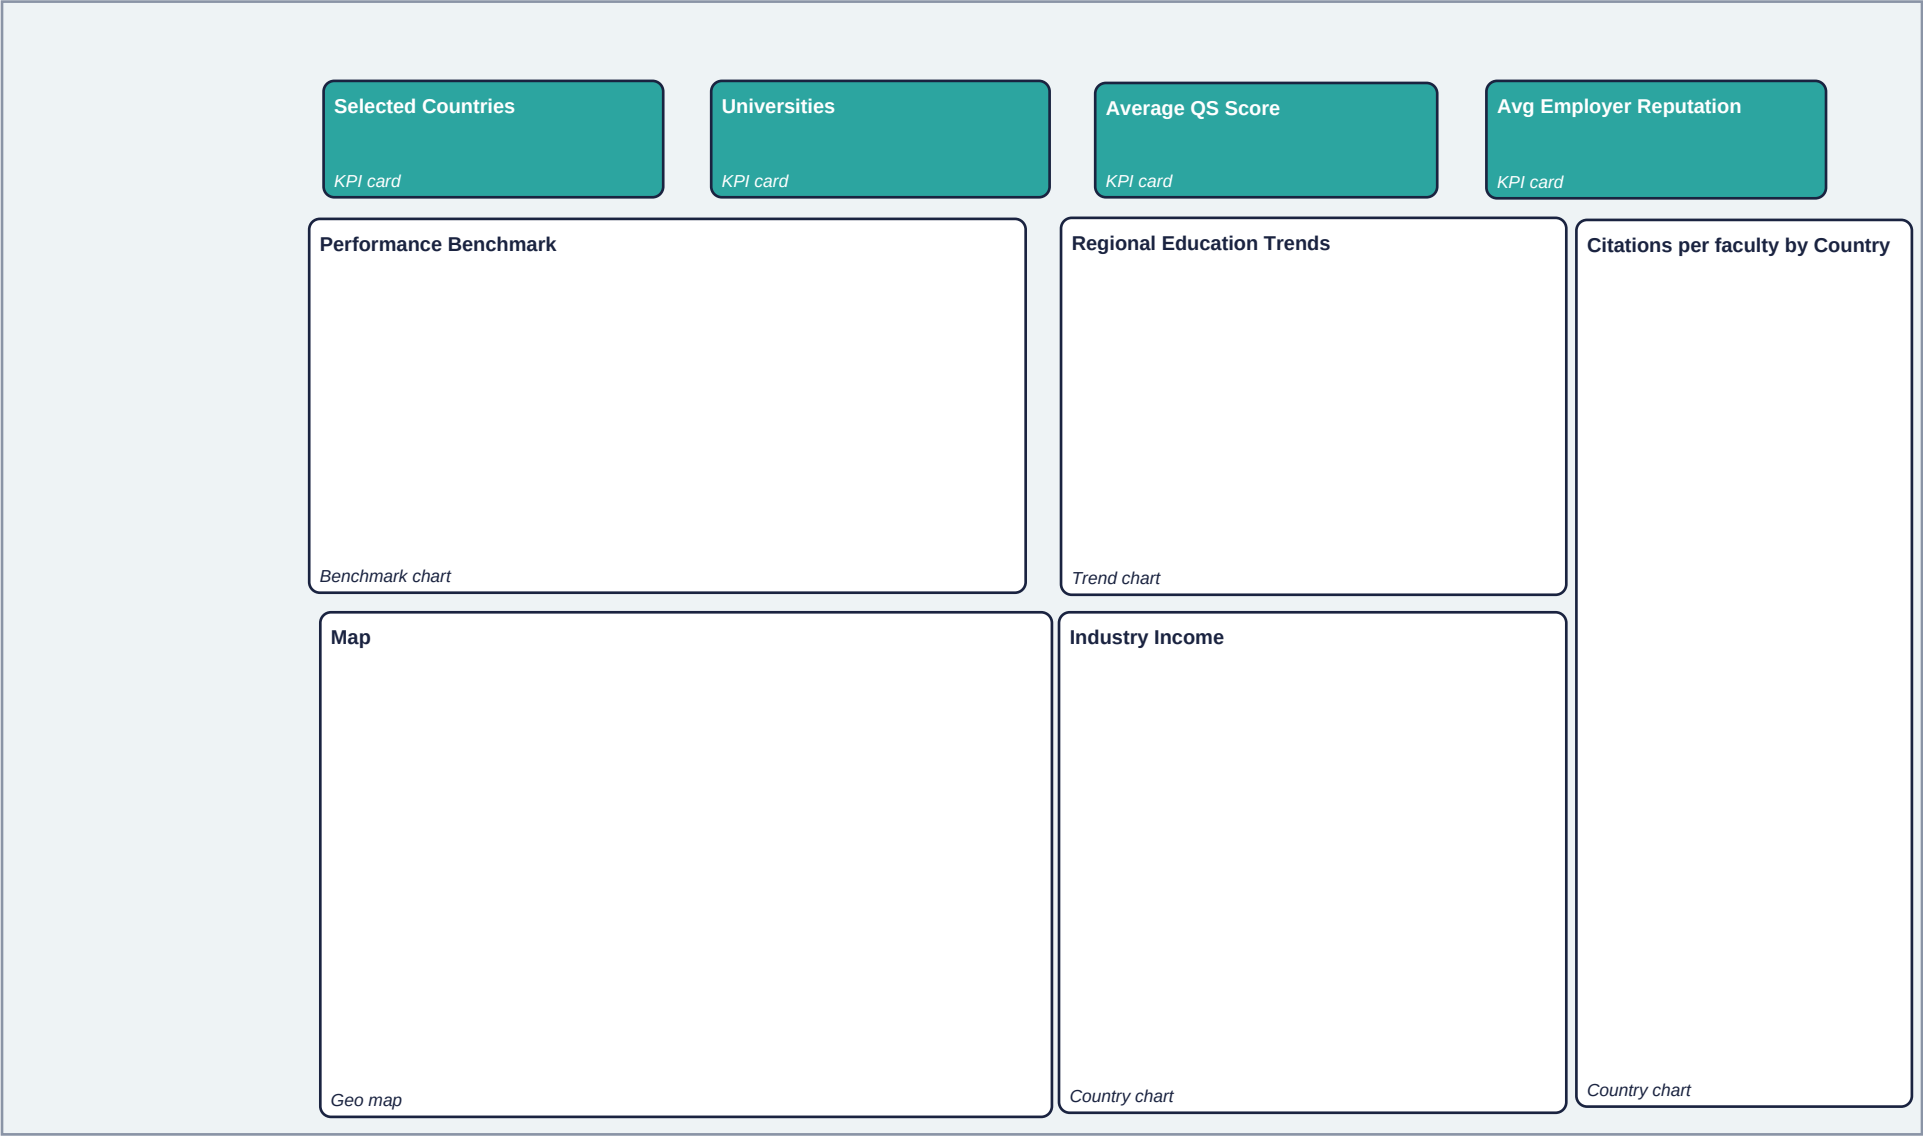

Filters: Region · Country · Performance Category

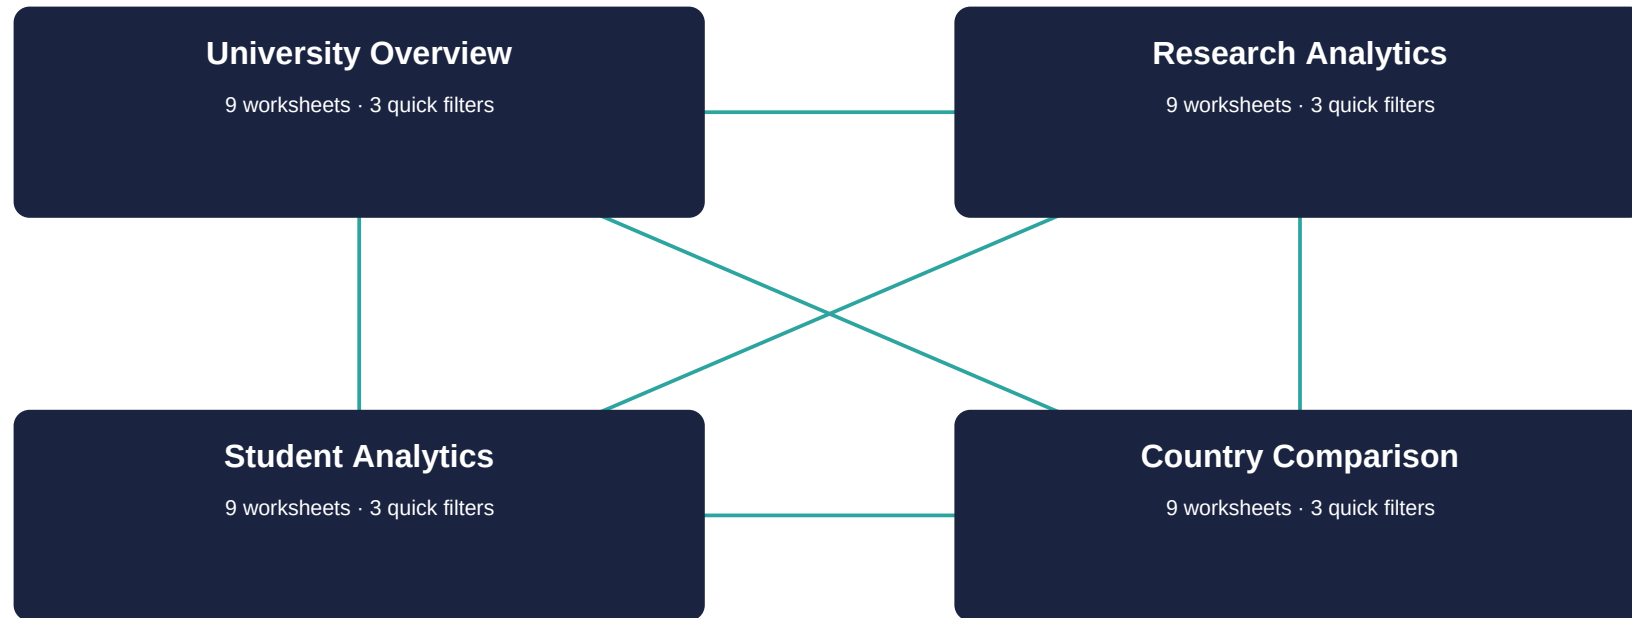

Student experience: internationalization and teaching capacity.

Filters: Region · Country · Performance Category

Benchmark one country's higher-ed system against another.

## Interaction Model

- Every dashboard links to the other three via navigation buttons (top-right of each canvas).
- Region / Country / Performance Category filters are scoped per-dashboard, applying to all worksheets on that dashboard.
- Country Comparison's map is the intended source for a filter action — selecting a country there can filter the matching university on University Overview.
- This flow is the integration target for Module 6; see the QA Testing Report for current build status.
