

MODULE 4

Dashboard Planning & Prototyping

A redesigned mentor-facing dashboard storyboard

01 **University Overview**

Dashboard concept

02 **Research Analytics**

Dashboard concept

03 **Student Analytics**

Dashboard concept

04 **Country Comparison**

Dashboard concept

Design Direction

A new layout system created from scratch; uploaded reference used only for content expectations.

Design principle

Use a left navigation rail instead of top tabs. Keep the user in one visual workspace while changing analytical views.

Information hierarchy

Header → filter context → KPI signals → analytical evidence → decision insight. This makes the dashboard readable in under one minute.

Visual system

Navy navigation, purple primary accent, blue benchmark metrics, teal positive trends, orange attention states, soft-gray canvas.

Interaction model

Filters are persistent within each dashboard. Selection highlights related marks, navigation preserves context, and reset returns to the default view.

Mentor-facing rationale

The redesign is intentionally different from the reference: asymmetric cards, compact KPI tiles, score indicators, wider analytical canvases and a dedicated comparison workspace.

University Overview

Institution snapshot • performance signals • global position

Research Analytics

Publication activity • citation quality • institutional impact

PURPOSE Measure research productivity and impact with a compact analytical workflow.

KEY VISUALS Trend canvas • impact mix • ranked institutions • shared filters

Student Analytics

Enrollment scale • outcomes • student success indicators

- PURPOSE

Understand student scale and outcomes across the selected geographic context.
- KEY VISUALS

Cohort mix • success trend • health score • outcome comparison

PURPOSE	Compare selected countries using a consistent set of normalized indicators.
KEY VISUALS	Three-country controls • benchmark matrix • leader summary • gap analysis

Planned Filters

Field-level implementation specification

University Overview	Region • Country • University	Cascading geographic hierarchy. University list responds to selected country.
Research Analytics	Region • Country • University	Same context as overview so research findings remain comparable.
Student Analytics	Region • Country • University	Same context; student measures change with institution selection.
Country Comparison	Region • Country A • Country B • Country C	Three-country benchmark selection. Institution filter intentionally excluded.

RESET BEHAVIOR

A reset action clears all selections and returns every dashboard to the All/Global default state. Filters should use consistent field names across the workbook.

Navigation & Dashboard Actions

Interaction specification for Tableau implementation

Navigation

Sidebar items switch dashboards. The active item is visually emphasized.

Filter interaction

Region → Country → University. Country Comparison replaces University with three country selectors.

Highlight action

Clicking a bar, score or institution highlights connected marks without changing the selected filter context.

Tooltip action

Tooltips show metric name, value, period and active geography/institution.

Reset action

Reset button clears filters and returns to the dashboard's default state.

Comparison action

Country selections update the benchmark matrix, leader summary and gap analysis together.

Tableau Build Blueprint & Acceptance

Definition of done for eduvision_prototype.twbx

Workbook

Four dashboards: University Overview, Research Analytics, Student Analytics, Country Comparison.

Data

Use the Module 3 dataset and preserve geographic/institution identifiers.

Design

Recreate the new sidebar, KPI cards, asymmetric analytical cards, typography and spacing.

Filters

Implement cascading geographic filters and three-country benchmark selection.

Actions

Verify navigation, highlight, tooltip, reset and coordinated comparison behavior.

QA

Check formatting, labels, legends, responsiveness, performance and empty-selection behavior.

Deliverables

dashboard_storyboard.pdf and eduvision_prototype.twbx.

Mentor approval

All four layouts approved and prototype interactions verified.

MODULE 4 STATUS TARGET

Design approved → Tableau prototype built → interactions verified → mentor review completed
